

Caladenia carnea
Pink Fingers

Mid-Spring. Occasionally pink but mostly white flowers on Barrm Birrm (above). Stem 15-25cm. Rear sepal is held upright, rarely bent (below right). Distinctive, red-striped labellum. Albino flowers are seen occasionally (below left). Common in most areas.

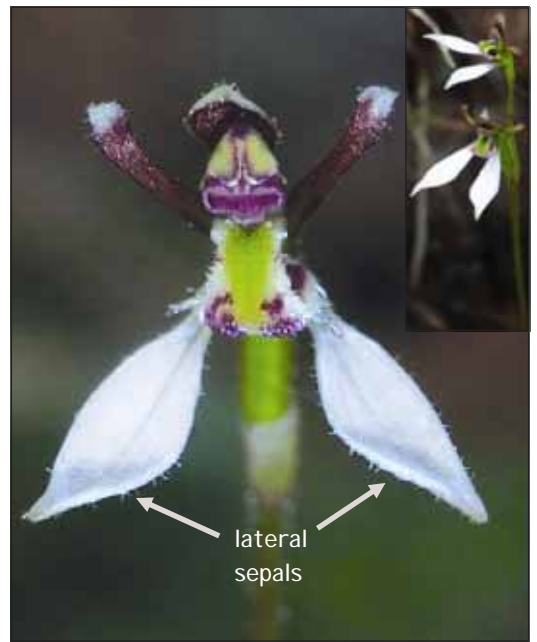

Mid-Spring. Distinctively shaped flower(s) on a 30cm stem. Two upright red-purple lateral petals, 1.5-3cm, give a hare-like appearance. Single basal leaf, ovate-lanceolate, to 2cm wide, stem-clasping. Damp, upper slopes.

Leptoceras menziesii
Hare Orchid

Caladenia clavigera
Plain-lip Spider-orchid

Mid-Spring. Spider-like flower on a stem to 30cm tall. Labellum has a purple tip. Unlike the other two Spider-orchids, this plant has no green comb-like side appendages (it has a plain lip on labellum). Low slopes.

Eriochilus cucullatus
Parson's Bands

Early Autumn. One stem to 20cm. 1-2 small flowers. Lateral sepals white, 1-1.5cm, spreading (like a parson's bands). Basal leaf not developed when in flower. Damp, upper slopes.
